Token   <token>

Body raw (json)

```json
{
  "title": "Updated Blog Post Title",
  "content": "This is the updated content of the blog post."
}
```

DELETE delete 🔒

http://localhost:5000/post/2

Delete Post

This endpoint is used to delete a specific post.

Request

- Method: DELETE
- URL: `http://localhost:5000/post/2`

Response

The response is in JSON format with the following schema:

```json
{
    "type": "object",
    "properties": {
        "message": {
            "type": "string"
        }
    }
}
```

You're doing amazing! 🧡

The response will include a status code of 200 and a JSON object with a "message" key.
